SUMMARY

Product design leader with 14+ years in design, including 6 years leading design teams, spanning design strategy and hands-on product design across enterprise SaaS, HR-tech, EdTech, PropTech, fintech and e-commerce. Most recently UX Design Director (previously UX Design Head) at PeopleStrong, owning design across 10+ enterprise HR products used by 500+ organisations in APAC and the Middle East. Built and managed the product design team from the ground up, shipped the company's first design system, led product design for two enterprise AI agents now live in production, and brought AI features across the full product suite. Now leading product design for TARA, Taggd's agentic AI platform. Works cross-functionally with CPO and CTO leaders.

LEADERSHIP HIGHLIGHTS

- **Built the design function:** grew and managed the product design team from 1 to 7 designers, and created its interview process, design critique culture, rituals and career-levelling framework.
- **Set company design direction:** authored PeopleStrong's first Design Vision, Principles & Maturity Framework, adopted company-wide and cited in investor materials.
- **Shipped enterprise AI:** led product design for 2 live AI agents and AI features across 10+ HR products; the AI Co-Recruiter cut time-to-hire by 40%+ across 100+ enterprise clients.
- **Scaled quality through systems:** built the first company-wide design system (200+ components), reducing design-to-dev handoff time by 35%.
- **Made research a habit:** launched the first structured usability-testing programme and quarterly UX audits, moving product NPS by +28 points.

SKILLS

Design Leadership Design strategy · Building design teams · People management & mentoring · Career levelling · Design ops · Design vision & maturity · Stakeholder management · Cross-functional collaboration

Product Design Product strategy · 0-to-1 products · Agentic & conversational AI design · Human-in-the-loop & AI explainability · Interaction design · Information architecture · Prototyping · Enterprise UX

Research & Quality User research · Usability testing · Research operations · Design systems & governance · Accessibility · Data-informed design (NPS, conversion, task-completion KPIs) · Web & mobile

Tools Figma, Figma Make, Miro, Jira, Claude, ChatGPT, Stitch, Sketch, Adobe XD, Illustrator, Photoshop

PROFESSIONAL EXPERIENCE

Independent Product Design Lead (Consultant) — Client: Taggd

Jul 2026 – Present

Taggd is an AI-native talent fulfilment and RPO company delivering enterprise hiring across India.

- Leading product design for TARA, Taggd's agentic AI platform, designing the interaction model and user experience across the full talent workflow, from job postings and candidate scoring to interviews and offers.
- Designing how the AI and Taggd's recruiters work together, with human-in-the-loop patterns from the AI Co-Recruiter.

UX Design Director (previously UX Design Head) — PeopleStrong · HR-Tech SaaS

Aug 2022 – Jul 2026

Owned design across 10+ enterprise HR products (HRMS, payroll, talent, L&D, analytics) for 500+ organisations in APAC and the Middle East. Promoted from Head to Director within a year.

Design Leadership & Operations

- Built, managed and mentored the product design team (1 to 7 designers), with its interview process, critique culture, sprint ceremonies and career levelling.
- Led cross-functional stakeholder management with CPO, CTO and product leaders across 10+ product lines.
- Launched the first structured user research and usability-testing programme, lifting NPS by +28 points.
- Led the redesign of core HRMS workflows, cutting user task-completion time by 40% across web and mobile.

AI Co-Recruiter: Agentic Hiring Platform (MAAX multi-agent architecture)

Design lead from ideation to global launch; owned the interaction model, the agent decision-surface system and the mobile-first product direction. Five specialised AI agents cover the full funnel, from an employee exit being detected to a structured interview verdict, automating coordination between steps while every key decision (shortlist, reject, advance, hire) stays an explicit human action.

- Led user research: 30+ conversations across 12 enterprise accounts (recruiters, hiring managers, TA leaders, candidates, interviewers) through 1:1 interviews, shadowing and journey mapping. Found that delay lived in the waiting between steps, not in decision time, which reframed the product design as event-triggered rather than task-driven.
- Made and defended a mobile-first design direction against desktop-default enterprise HR norms: designed the candidate journey on WhatsApp and a branded micro-site, with recruiter and manager views carrying identical state across phone and web, so a manager could shortlist between meetings.
- Designed the agent "decision surface" pattern: every agent shows match scores, JD-fit reasoning and flags before acting, then waits for an explicit human tap. This was the mechanism that made enterprise TA teams comfortable letting an agent act on their behalf.
- Made AI explainability, human authority, candidate recourse and bias auditability core design requirements from day one, as hiring AI is high-risk under the EU AI Act and audit-regulated under NYC Local Law 144.
- **Result:** 40%+ reduction in average time-to-hire, live across 100+ enterprise clients globally, with materially higher candidate response rates and lower drop-off after moving outreach onto WhatsApp.

AI Employee Relations (ER) Agent

- Led end-to-end product design of a conversational AI that handles employee grievances, policy queries, disciplinary guidance and HR escalation routing at enterprise scale, designed to feel empathetic in emotionally sensitive workplace situations rather than transactional.
- **Result:** 60%+ reduction in HR workload on routine ER cases across Southeast Asian enterprise accounts.

AI Across the Product Suite

- Led design for bringing AI features across PeopleStrong's full range of HR products (HRMS, payroll, talent, L&D and analytics), so AI became part of the whole platform rather than a single add-on, built on the same explainability and human-control patterns as the agents.

OneXP: Ground-Up Rebuild of the Product Suite

- Directed the redesign of the full HR suite (Talent: Performance, Career & Skills, Succession & Learning; Core HR: HRIS, Attendance, Leave & Exit) into one guided, consistent employee experience, including a redesigned offboarding flow.
- Evolved a 60+ component library into PeopleStrong's first company-wide design system (200+ components), cutting design-to-dev handoff time by 35%; built the OneXP Design System, one component library and interaction model applied across 6+ modules with full web and native-mobile parity.
- Led OneXP Mobile, a ground-up app rebuild (not a shrunk copy of web) around real employee moments: one-tap attendance, apply-and-track leave, manager approvals between meetings and bite-size learning nudges.

User Experience Lead **Aakash Educational · EdTech** Sep 2020 – Aug 2022

Led a team of designers through Aakash's offline-to-online transition during COVID-19, taking its JEE/NEET learning and testing ecosystem digital for 300,000+ students and owning four flagship products end-to-end across web, iOS and Android.

Online Test Platform: an at-home exam hall

- Led user research across Tier 2/3 India (Delhi, Patna, Indore, Vijayawada): shadowed 40+ students testing at home, in centres and on shared family phones, and ran 5 rounds of usability testing on 2G-throttled, low-end Android devices. Found that trust in the test surviving to the end mattered more than any single feature.
- Designed a server-synced timer and local-first auto-save so a dropped connection never lost progress, cutting mid-test drop-off from 39% to 11% and rage-tap events on answer options by 74%.
- Designed a full-screen, colour-coded mobile question palette adapted from the OMR sheet students already knew, since 64% of attempts began on a 5.5" screen; also designed the NTA-style desktop test player (palette, section-locking, timer) to match the real exam-centre experience.
- Co-designed the results analytics with the academic team (rank, percentile, subject breakdown, time per question), turning a bare score into a revision plan; median result-page dwell time rose from under 90 seconds to 7+ minutes, with students sharing results on WhatsApp.

NEET Preparation App & Ask the Faculty (live doubt resolution)

- Led product design for the NEET Preparation App: chapter-wise study plans, video lectures, revision cards and daily practice tests with streaks and subject-mastery visualisations.
- Designed Ask the Faculty, a real-time doubt-resolution system (chat, curated FAQ, live 1:1 and group faculty video with screen-sharing) that replaced chaotic WhatsApp groups for remote students.
- Delivered 6 major releases in 18 months across all four products at once, holding design quality through structured sprints; ran user research across student, parent and teacher mental models to lift engagement and course completion.

UX/UI Design Consultant **Letswork · PropTech, Dubai** Jan 2020 – Jan 2021

Led end-to-end UX for Letswork's original product ecosystem (native app, responsive web and partner admin console) for the UAE flexible-workspace market. The product now serves 80,000+ members across 25 cities.

- Ran user research across Dubai, Abu Dhabi and Sharjah with freelancers, consultants, remote founders, travellers and venue partners, mapping how the UAE market actually discovers and books workspace rather than importing Western coworking assumptions.
- Solved the core information-architecture problem: unified five booking logics (coworking check-ins, hourly meeting rooms, day offices, studio rentals, multi-day blocks) into one four-step booking flow that adapts per space type while keeping the same shape.
- Designed a unified map-and-list discovery surface with five iconographic space-type markers, replacing fragmented word-of-mouth discovery over WhatsApp and phone calls.
- Designed the partner admin platform for non-technical venue operators (live availability calendar, one-tap accept/decline queue, occupancy tracking) and a tiered membership system (Daily to Premium) to replace opaque, enquiry-only pricing.
- Delivered 100+ screens as one coherent ecosystem, mobile-first for iOS/Android and desktop-native for web; now at 80,000+ members, 500+ workspaces and 25 cities across MENA, Europe and South Asia.

UX/UI Design Lead **Emaar India · Reel Cinemas, UAE** Jul 2019 – Jan 2020

Designed the digital product ecosystem for Reel Cinemas, one of the UAE's premium cinema brands (Gold, 4DX, ScreenX, Dolby, Reel Junior), letting audiences discover and book entirely online.

- Designed the iOS and Android app: multilingual movie discovery (Hollywood, Bollywood, Arabic, Hindi, Tamil, Telugu), real-time showtimes, interactive seat selection with group booking, secure checkout and e-ticketing.
- Designed the responsive web booking platform with the same end-to-end flow, plus venue pages showcasing each premium format, carrying the luxury feel of the physical cinema into every screen.

Sr. Visual & UX Designer **Times Internet · Media & Insurance** Feb 2017 – Dec 2018

- Owned product UX/UI for ET Insure (health, car, bike and term insurance sold direct to consumers), simplifying comparison and purchase with transparent premiums and readable policy details to reduce drop-off in a low-trust category.
- Led high-volume marketing and visual design (campaigns, ad creatives, email templates) across Times Internet properties for audiences in the millions.

Visual & UX/UI Designer **Jabong · Myntra · Fashion E-Commerce** Aug 2014 – Feb 2017

- Designed the full fashion purchase funnel (discovery, search, product pages, cart and checkout) across India's two largest fashion platforms, contributing to an 18% uplift in cart-to-purchase conversion.
- Developed reusable UI patterns and a consistent visual language used across both platforms on web and app.

Executive Creative Services **RateGain · Travel & Hospitality SaaS** Sep 2010 – Aug 2014

- Designed brand identity, marketing collateral, UI screens and digital communications for travel and hospitality SaaS products, and designed first B2B SaaS dashboards alongside product and engineering.

EDUCATION & PORTFOLIO

Bachelor of Computer Applications, National Institution of Engineering (2010 – 2013)
